

Siracom to Launch WiFi Videophones at CeBIT

UniData stand-alone handsets give live, personalised videoconferencing over WiFi networks; can conference up to three users on one call

CeBIT Hall 13, Stand B54

18 February, 2009 - Siracom, the value-added distributor of wireless and wired communications solutions, is to launch a new WiFi videoconferencing handset at CeBIT.

The UniData SQ-3000 is a Wi-Fi SIP phone and Wi-Fi video conferencing end-point with the look and feel of a mobile phone. Unlike other videoconferencing products that require fixed installation the Unidata handset works as a truly mobile IP voice and video conferencing solution.

The handset is aimed at both business and personal use, and also at specific applications such as premises management, security, and education. It uses standard videoconferencing codecs which make it compatible with room based and desktop video conferencing systems. Via SIP it also enables users to make and receive phone calls using their company IP PBX or VoIP services, across while taking advantage of full PBX functionality.

Rob Leggett, Siracom's sales director said: "The great advantage of the Unidata handset is that it's a personalised device, giving users live videoconferencing with mobility, in any location with wireless network access."

The handset has an easy-to-use, mobile phone user interface, and includes a phonebook with up to 1,000 contacts, muting and call waiting capability. The device also includes fully-featured web browser capability, and has a range of WiFi security options, including 128-bit WEP and WPA.

The handset uses H.264 video compression and has a 2.8inch screen with 320x240 resolution. It has 2-hour video talk time and 9-hour voice only talk

time and weighs just 135g. The Unidata SQ-3000 will be available from Siracom from April.
